ANDREA CAMOIA

/ Turin, Italy / www.andcamo.dev / andreacamoia10@gmail.com /

+---./CV/ABOUT---+

Computer Science Master's student specializing in Artificial Intelligence at the University of Turin. Driven by a continuously expanding knowledge in core AI domains, particularly Deep Learning, NLP and Computer Vision. Bringing hands-on experience in academic research and co-authorship of a scientific publication. Currently seeking a thesis internship or a junior role compatible with the final stages of my Master's studies.

+---./CV/EDUCATION---+

Master in Computer Science, curriculum in Artificial Intelligence *2024 - present*
University of Turin
GPA: 29.5/30

Bachelor's Degree in Computer Science *2021 - 2024*
University of Salerno
Final grade: 110/110 cum Laude
Thesis in Software Engineering and Artificial Intelligence

+---./CV/PUBLICATIONS---+

Turning AI into a regulatory sandbox: exploring information disorder mitigation strategies with ABM and deep reinforcement learning *2025*
R. Zaccagnino, N. Lettieri, D. Malandrino, L. Lomasto, A. Camoia, A. Guarino
Springer Nature, Neural Computing and Applications

Co-developed a framework to counter Social Media Information Disorder using Model-Based Simulation and Reinforcement Learning. Engineered a dedicated web application to manage simulations and provide advanced data visualization of experimental results.

+---./CV/PROJECTS---+

P.I.E.N.A.H. (Private Image Evaluation Network on Arduino Hardware) *2026*
Engineered an Edge AI solution to monitor spatial occupancy in classroom environments using **computer vision techniques**. The system leverages a YOLO-based **segmentation model** to detect specific objects (people, laptops, backpacks) and dynamically maps these detections against predefined geometric seat masks to calculate real-time availability. Deployed entirely on an Arduino Uno Q Board, the architecture ensures strict data privacy, high scalability, and cost-efficiency by executing all visual processing locally without cloud infrastructure.
More info at: github.com/AndCamo/EgiNB-Project

Clean Desk *2024*
Developed a cross-platform desktop application (Windows/macOS) that leverages AI to reorganize folder structures based on file semantics. Managed the full lifecycle, from training ML models for content classification to full-stack implementation following software engineering best practices.
More info at: github.com/AndCamo/CleanDesk

+---./CV/SKILLS---+

Python Programming
Advanced knowledge in Python programming, with experience using data analysis and machine learning libraries (Pandas, NumPy, scikit-learn), NLP, and backend development.

Machine Learning & Deep Learning
Extensive and evolving knowledge of Machine Learning and Deep Learning principles, with experience in implementing various neural network architectures using PyTorch.

HTML, CSS, JavaScript
Hands-on experience in web technologies, leveraging Electron and Node.js to develop cross-platform desktop applications.

Efficient Attention to Detail
Strong attention to detail and a proactive mindset in optimizing all components of a project, ensuring that every task is refined to its highest standard without compromising timelines.

+---./CV/SKILLS---+

Italian (native)

English (fluent, B2)
